Seasonal Wind Directions in Lebanon, Ohio

- **Spring (March – May):** Winds most frequently blow from the **south** and **southwest**, bringing warmer, moister air as storm systems track across the Midwest.
- **Summer (June – August):** Prevailing winds remain largely out of the **south** and **southwest**, though summer patterns are generally lighter and more variable.
- **Autumn (September – November):** Wind directions transition and show higher frequency from the **east** and **north/northeast** during specific weeks, shifting back to mixed westerly/southerly flows as winter approaches.
- **Winter (December – February):** Prevailing winds tend to originate more frequently from the **west** and **southwest**, driven by dominant continental and jet stream patterns.
